>The file is called: XPCOM131.ZIP
>and is located in: /HAMRADIO/PACKET/

To get XPCOM, send email to HAM-server@GRAFex.Cupertino.CA.US
In the text, place:

GET /HAMRADIO/PACKET/XPCOM131.ZIP

If you have not done so, I suggest you also get the HELP file. This can
be done by placing HELP on a single line in the message.

>After you make your request, the file will be sent to you UUENCODED...

If you do not have UUDECODE, see the HELP file for information.

>You need to have the latest version of PKUNZIP which is now up to ' G ' I
>believe...

The latest version of PKUNZIP is not backwards compatible. To be on the
safe side, order both if you do not have them.

GET /HAMRADIO/UTILITY/PKUNZIP.EXE
GET /HAMRADIO/UTILITY/PKUNZIP2.EXE

All file requests can be put into a single message.

Sounds good. But how do we make the request?? Is it available on any
internet anonymous FTP servers?
